

NORTH AMERICAN DX HEARD IN UK & EIRE (1953 - present day)

compiled by Steve Whitt; last updated 16/03/06

Key to the Table:

This table lists nearly 900 North American MW station reported heard in the UK and Eire since 1953. Every known logging post 1979 is included whereas between 1953 and 1979, in the main, only stations that are still operational today are included. Records are not 100% perfect before 1979 and are very patchy pre-1966. Detailed annual entries are included for every year since 1981.

Source material is the Medium Wave Circle magazine archive plus additional material from the British DX Club (Communication) and the World DX Club (Contact). Stations are listed under the callsign they were using when last logged. For each year an indication is given of how often a station was reported. An empty field indicates that no published report of a logging has been found. The contents of a field may include the following symbols:

+	a few (1-2) reports by DXers operating "at home"	++	several reports by DXers operating "at home"
+++	many reports by DXers operating "at home"	+++	(bold) are/were heard widely throughout the year.
§	only heard on DX-pedition to Sheigra, Scotland	A	only heard on DX-pedition to Anglesey, Wales
Sh	only heard on DX-pedition to the Shetland Islands	R	only heard on DX-pedition to Rosmuc, Ireland
>	indicates when a station started operation	<	indicates when a station ceased operation

If "at home" loggings have been reported then reports for the same year from DX-peditions are not shown. Stations logged extremely rarely are usually attributed to a particular reporter by using their initials. Where possible, for stations not logged since 1984, the date of the last known logging is included; the format "month/year; initials of reporter" is used. Stations that are silent or closed are printed in italics typeface. The comments field includes info on frequency and callsign changes. It seems that the commonest stations are under-represented in logs by virtue of the fact that some reporters only report really unusual catches. Certain innacurate/ dubious reports have been omitted, as have "tentative" and "presumed" loggings. First known loggings are clearly indicated as underlined entries.

This year's new entries are further **highlighted** in the station callsign column.

Updates, corrections, and suggestions will be gratefully received by the author; Steve Whitt, Landsvale, High Catton, York YO41 1EH (editor@mwcircle.org).
